Instructions

1. You should attempt all 40 multiple choice questions (MCQs).
Each question is worth one mark.
2. There is only one correct answer per question.
3. You need to answer 28 questions correctly to pass the exam.
4. You have 90 minutes to complete this exam.
5. This is an '**open book**' exam. You can use the *ITIL Product (Version 5)* Official Book.
6. Use the Scenario Booklet ITIL Car Rental (ICR) Scenario for additional context.
7. No materials are allowed other than the exam paper, the *ITIL Product (Version 5)* Official Book, and the Scenario Booklet.
8. Do not use information from one question to answer another.

1. Which output **BEST** reflects the purpose of the ITIL Product and Service Lifecycle?
 - A. To define a fixed sequence of activities that should be followed for all products
 - B. To separate product management activities from service management activities
 - C. To support the holistic management of products and services across shared lifecycle management activities
 - D. To describe how services are transitioned and operated after products are built
2. Which statement **BEST** reflects the conceptual difference between a digital product and a digital service?
 - A. A digital product provides capabilities, while a digital service enables value realization through use of those capabilities
 - B. A digital product delivers value directly to the customer, while a digital service supports internal operations
 - C. A digital product defines customer outcomes, while a digital service defines technical resources of the digital product vendor
 - D. A digital product and a digital service are alternative terms for the same concept
3. How do an organization's value chain activities support the ITIL Product and Service Lifecycle?
 - A. By defining the governance structures that control product and service decisions
 - B. By enabling the performance of lifecycle management activities that create and deliver value
 - C. By aligning lifecycle stages directly with operational process execution
 - D. By sequencing product and service activities into a fixed, linear process
4. Which of the following **BEST** describes the focus of the 'discover' activity within the product and service lifecycle?
 - A. It is performed only once at the beginning of a product's lifecycle
 - B. It focuses exclusively on organizational and portfolio-level analysis
 - C. It replaces 'design' and 'build' activities by validating solutions early
 - D. It is performed iteratively at product level to inform roadmaps, backlogs, and improvement initiatives
5. Which of the following **BEST** describes the focus of the 'design' activity when viewed across the product and service lifecycle?
 - A. It defines customer needs and prioritizing opportunities
 - B. It applies to products, not to related service interactions
 - C. It includes creating solutions so they can be built, operated, delivered, and supported effectively
 - D. It includes defining implementation tasks so solutions can be developed, deployed, and monitored effectively

6. A product team has approved a new feature that requires additional cloud capacity and specialist skills.

Which action **BEST** reflects the **CORRECT** application of the 'acquire' activity?

- A. Updating the product backlog to reflect the new feature
- B. Securing and allocating the required resources to enable implementation
- C. Designing the technical solution to use the new capacity efficiently
- D. Deploying and configuring the feature in the live environment for use

7. Which statement **BEST** explains how the product and service portfolio informs the 'discover' activity?

- A. The portfolio provides context that influences prioritization and alignment during discovery
- B. The portfolio fully defines product requirements before discovery activities begin
- C. The portfolio is produced only after discovery activities are completed
- D. The portfolio restricts discovery work to existing approved products

8. Which output is **MOST** closely associated with the completion of a 'discover' activity iteration?

- A. Deployed product features and updated service catalogue entries
- B. Tested solution components and technical documentation
- C. Operational performance reports and incident trends
- D. Updated product roadmap and refined backlog items

9. Please refer to the ITIL Car Rental scenario for additional context when answering this question.

At the start of 'discover' for ICR's Unified Mobile App, Maria gathers information about regulatory differences between countries, customer expectations across rental, car sharing, and autonomous services, and competitive pressure from ride-sharing platforms.

Which action **BEST** demonstrates **CORRECT** application of the step 'assess the product context' before proceeding further in 'discover'?

- A. Synthesizing this information to understand constraints, drivers, and opportunities shaping the product
- B. Converting the information into detailed solution designs for the mobile application
- C. Using the information to select platforms, tools, and technology services
- D. Applying the information to plan rollout strategies for various markets

10. Which metric **BEST** demonstrates that the 'discover' activity is effectively enabling value creation?

- A. Number of successfully deployed releases per quarter
- B. Mean time to restore service after incidents
- C. Percentage of automated test coverage achieved
- D. Strategic alignment and commercial viability of products

11. Please refer to the ITIL Car Rental scenario for additional context when answering this question.
- During 'discover' for ICR's Unified Mobile App, the team is under significant time pressure to move quickly into 'design'. Maria is concerned that assumptions about customer needs may be incomplete.
- Which action **BEST** reflects a practical recommendation for effective discovery under time constraints?
- A. Finalize the initial direction to avoid further delays
 - B. Document assumptions and validate them during later lifecycle stages
 - C. Rapidly test and challenge assumptions using evidence from real users
 - D. Prioritize delivery speed over further discovery activities and move to design
12. A product team is redesigning a customer-facing digital service and wants to follow a human-centred design approach.
- Which action **BEST** demonstrates **CORRECT** application of human-centred design principles?
- A. Selecting a proven technical solution to reduce design effort and minimize the iterations
 - B. Observing users in their real context and iteratively refining prototypes based on feedback
 - C. Defining a complete set of requirements before starting design
 - D. Reusing existing interface designs to ensure consistency across products
13. Which output is **MOST** closely associated with the completion of the 'design' activity?
- A. Integrated and tested product components
 - B. Deployed services available for customer use
 - C. Operational performance reports and incident trends
 - D. Design specifications and prototypes for products
14. Please refer to the ITIL Car Rental scenario for additional context when answering this question.
- Alex is concerned that the Unified Mobile App must support three different service models while sharing core capabilities such as payment and authentication.
- Which action **BEST** demonstrates **CORRECT** application of the 'design' activity?
- A. Defining monitoring thresholds for live environments
 - B. Prioritizing features based on market demand
 - C. Creating target architecture blueprints for shared and independent components
 - D. Planning phased releases to reduce transition risk
15. A design team consistently produces solutions that require significant rework during 'build' and 'transition'.
- Which improvement action **BEST** addresses a critical success factor of the 'design' activity?
- A. Strengthening collaboration between designers, architects, and downstream lifecycle teams
 - B. Increasing the frequency of deployments to gather operational feedback
 - C. Increasing automation across build and test activities to improve delivery efficiency
 - D. Expanding analysis of live service incidents to identify operational improvement needs

16. Please refer to the ITIL Car Rental scenario for additional context when answering this question.

While designing a Unified Mobile App that supports rental, car sharing, and autonomous ride options, the team faces pressure to finalize designs quickly.

Which action **BEST** applies a practical recommendation for effective design in this situation?

- A. Iteratively validating design decisions with users and stakeholders before finalizing them
- B. Freezing the design early to reduce rework during build
- C. Handing design decisions to technical teams to accelerate delivery
- D. Limiting design input to documented requirements only

17. Which management practice **PRIMARILY** ensures that service quality is defined, monitored, and reported during the 'deliver' activity?

- A. Service request management
- B. Knowledge management
- C. Service level management
- D. Monitoring and event management

18. An organization has completed the 'acquire' activity for a new digital product. Which outcome **BEST** indicates that the activity has been successfully completed?

- A. Approved solution designs and architectural models
- B. Fully integrated and tested product components
- C. Deployed services available to customers
- D. Allocated resources and agreements ready to support build and operation

19. Please refer to the ITIL Car Rental scenario for additional context when answering this question.

While preparing to acquire cloud infrastructure, AI services, and payment capabilities for a Unified Mobile App, the organization identifies multiple sourcing options: internal platforms, single external vendors, or a mix of specialized suppliers.

To correctly apply the 'assess sourcing options' step of the 'acquire' activity, which analysis should be performed **FIRST**?

- A. Compare deployment timelines to determine which option enables the fastest go-live
- B. Select the least expensive sourcing option to reduce overall product cost
- C. Evaluate sourcing options against functional needs, scalability, regulatory constraints, and long-term integration impact
- D. Choose the sourcing option preferred by the majority of delivery teams

20. A product team experiences repeated delays due to unavailable tools and external services.

Which action **BEST** addresses a critical success factor of the 'acquire' activity?

- A. Increasing automation so build and test activities complete more efficiently
- B. Accelerating approvals so releases can move into production faster
- C. Improving coordination so resources and suppliers are secured in line with product timelines
- D. Expanding operational support so incidents can be resolved more quickly

21. Please refer to the ITIL Car Rental scenario for additional context when answering this question.

The organization plans to acquire external payment services that must comply with different regulations across regions.

Which action **BEST** reflects a practical recommendation for effective acquisition?

- A. Standardizing on a single provider regardless of regional differences
- B. Analysing regulatory, compliance, and integration requirements before finalizing sourcing decisions
- C. Allowing regional teams to independently contract local providers as it enables maximum control
- D. Addressing compliance concerns after services are live

22. Which statement **BEST** describes the relationship between 'design' and 'build' activities in an integrated product lifecycle?

- A. 'Build' activities are independent of 'design' once development starts
- B. 'Design' activities are performed only to support early planning decisions
- C. 'Build' activities focus on validating user needs identified during design
- D. 'Design' and 'build' activities are closely coordinated to ensure solutions can be developed effectively

23. Which output is **MOST** closely associated with the completion of the 'build' activity?

- A. Approved design specifications and prototypes
- B. Contracted services and allocated supplier resources
- C. Operational performance reports and incident data
- D. Integrated and tested product components ready for transition

24. Please refer to the ITIL Car Rental scenario for additional context when answering this question.

After design specifications for the Unified Mobile App are approved, multiple teams are ready to start development on shared and service-specific components.

Which action **BEST** applies the **FIRST** step of the 'build' activity before development begins?

- A. Structuring build work so components align with approved designs
- B. Scheduling deployment windows to reduce business impact
- C. Training support teams on expected user issues
- D. Prioritizing features based on customer feedback

25. Why is close collaboration between roles considered a critical success factor for the 'build' activity?

- A. It ensures faster approval of releases
- B. It supports effective integration, testing, and resolution of issues during development
- C. It enables prioritization of new product ideas
- D. It improves customer communication during service delivery and operation

26. Please refer to the ITIL Car Rental scenario for additional context when answering this question.
- ICR is preparing to release a new version of its Unified Mobile App that enables customers to unlock rental cars via their smartphones. Before activating the feature for users, the product team reviews existing Service Level Agreements (SLAs) and current onboarding procedures.
- Which step of the 'deliver' activity is ICR **PRIMARILY** performing in this situation?
- A. Assess service delivery commitments and available solutions
 - B. Identify and confirm delivery plan and resource availability
 - C. Execute delivery plans and report delivery status to stakeholders
 - D. Capture incidents and initiate service recovery actions
27. Which statement **BEST** describes a phased or incremental approach to product transition?
- A. All product features are released at the same time to minimize transition effort
 - B. A single, coordinated release where the new product replaces the old one
 - C. Functionality is released gradually to reduce risk and allow learning between releases
 - D. Transition activities are postponed until full operational stability is achieved
28. Which output is **MOST** closely associated with ensuring that a transitioned product can be effectively used and supported?
- A. Finalized design specifications and architecture models
 - B. Signed supplier contracts and allocated resources
 - C. Updated operational documentation and support readiness
 - D. Defect logs generated during development and testing
29. Please refer to the ITIL Car Rental scenario for additional context when answering this question.
- During transition preparation for the Unified Mobile App, several teams disagree about production configuration details and monitoring expectations.
- Which action **BEST** applies the transition step that turns assessment outputs into actionable preparation?
- A. Check the live environment for security issues after the release
 - B. Conduct a post-transition debrief and add actions to the backlog
 - C. Produce a transition plan with owned tasks, dependencies, and confirmed resource availability
 - D. Publish a transition results report with rollback counts and timestamps
30. Please refer to the ITIL Car Rental scenario for additional context when answering this question.
- During the 'transition' activity, multiple external suppliers provide map services, payment processing, and cloud infrastructure.
- Which action **BEST** reflects a practical recommendation for ensuring an effective transition?
- A. Assume suppliers will adjust automatically once the product is live
 - B. Clearly onboard suppliers and confirm roles, responsibilities, and escalation paths
 - C. Limit supplier involvement to contract management only
 - D. Address supplier coordination only if issues occur after launch

31. Which practice **MOST** directly enables the 'operate' activity by providing visibility into the health and performance of live products and services?
- A. Deployment management
 - B. Release management
 - C. Monitoring and event management
 - D. Business analysis
32. Which output is **MOST** closely associated with effective execution of the 'operate' activity?
- A. Updated product roadmaps and prioritized backlogs
 - B. Signed supplier contracts and allocated human and technology resources
 - C. Design changes identified during prototyping
 - D. Operational data and service performance information
33. Please refer to the ITIL Car Rental scenario for additional context when answering this question.
- During a daily health check, automated monitoring detects repeated authentication errors affecting one service component.
- Which action **BEST** applies to the third step of the 'operate' activity?
- A. Ignore the issue unless it affects business-critical users and customers
 - B. Record the issue for discussion at the next planning meeting
 - C. Follow the runbook to investigate, fix the issue, and document the outcome
 - D. Disable the alert to reduce monitoring noise
34. Please refer to the ITIL Car Rental scenario for additional context when answering this question.
- The operations team plans to introduce AI-based alert correlation to manage the growing volume of monitoring data. However, alerts are inconsistent, poorly structured, and often duplicated.
- Which decision **BEST** reflects the recommended operational approach?
- A. Deploy the AI tool immediately to reduce human effort
 - B. Increase alert thresholds to reduce noise
 - C. First improve data structure, observability modelling, and event hygiene
 - D. Replace existing monitoring tools with a new AI-enabled platform
35. Which practice **MOST** directly enables the 'support' activity by ensuring that user issues and queries are handled effectively?
- A. Service desk
 - B. Service level management
 - C. Release management
 - D. Problem management
36. Which output **BEST** reflects the contribution of the 'support' activity to the digital product lifecycle?
- A. Stable service availability measured against agreed targets
 - B. Integrated and tested product components
 - C. Knowledge, data, and insights derived from user interactions and issues
 - D. Products and services released and ready for use

37. Please refer to the ITIL Car Rental scenario for additional context when answering this question.
- After resolving a major incident, metrics show recovery time was fast; however, similar incidents have occurred previously.
- Which action **BEST** applies the final step of the 'support' activity, ensuring long-term value improvement?
- A. Analyse the impact and urgency of the incident and update the ticket with this information
 - B. Focus the review on individual errors to prevent repetition
 - C. Reduce alert thresholds to detect future issues earlier
 - D. Conduct a data-driven review and log systemic improvements
38. Please refer to the ITIL Car Rental scenario for additional context when answering this question.
- A payment processing outage affects users in one market. The support team restores service quickly and offers alternatives during the disruption.
- Which action **BEST** applies a practical recommendation for effective support in this situation?
- A. Delay customer communication until the root cause is fully understood
 - B. Engage users during the incident and restore service using agreed response practices
 - C. Escalate the issue to product design before restoring service
 - D. Focus only on internal resolution without user-facing updates
39. Which option **BEST** reflects a success factor that supports effective product management?
- A. Detailed operational procedures for incident handling
 - B. Continuous collaboration between product, service, and other stakeholder roles
 - C. Comprehensive performance reporting for all products and services
 - D. Formal approval of every product change through centralized governance
40. Organizations adopt different business and operating models.
- How should value streams integrate lifecycle management activities to effectively support these different models?
- A. By ensuring every value stream includes all stages of the product and service lifecycle
 - B. By adapting the scope of lifecycle management activities included based on how value and consumers are defined
 - C. By standardizing lifecycle integration so that value streams remain identical across organizations
 - D. By prioritizing internal efficiency over alignment with the organization's business model
