# 1. Introduction

The purpose of the DevOps Institute®: DevOps Foundation® certification and its associated course is to impart, test, and validate knowledge of DevOps basic vocabulary, principles, and practices. The vocabulary terms, concepts and practices are documented in the Official Training Materials provided to the learners. DevOps Foundation® is intended to provide individuals with an understanding of basic DevOps concepts and how DevOps may be used to improve communication, collaboration and integration between software developers and IT operations professionals.

Although there are no formal prerequisites for the exam, PeopleCert highly recommends that candidates complete at least 16 contact hours (instruction and labs) as part of a formal, approved training course delivered by an Authorized Training Organization of PeopleCert to prepare candidates for the exam leading to the DevOps Foundation® certification.

The DevOps Foundation® examination is accredited, managed and administered under the strict protocols and standards of PeopleCert.

## 2. Exam overview

|                              |                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Material allowed</b>      | Official Training Material                    | This is an 'open book' exam. Official Training Materials can be used for study and during the exam.                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Exam duration</b>         | 60 minutes                                    | Candidates taking the exam in a language that is not their native or working language may be awarded 25% extra time, that is 75 minutes in total.                                                                                                                                                                                                                                                                                                                                                   |
| <b>Number of marks</b>       | 40 marks                                      | There are 40 questions, each worth 1 mark. There is no negative marking.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Provisional pass mark</b> | 65%                                           | Candidates need to answer 26 questions correctly to pass the exam.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Level of thinking</b>     | Bloom's levels 1 and 2                        | "Bloom's level" describes the type of thinking needed to answer the question. For Bloom's level 1 questions, you need to <b>recall</b> information/knowledge about the DevOps concepts and vocabulary terms. For Bloom's 2 questions, you need to show <b>understanding</b> of these concepts in context.                                                                                                                                                                                           |
| <b>Question types</b>        | Standard, Negative, Missing word(s), and List | The questions are all 'multiple choice'.<br>'Standard' questions have a stem and four answer options.<br>'Negative' questions are 'standard' questions in which the stem is negatively worded.<br>For the 'missing word(s)' questions, there is a sentence with a word or more words missing and candidates have to select the missing word from four options.<br>For the 'list' questions, there is a list of four statements, and candidates have to select two correct statements from the list. |
| <b>Delivery</b>              | Web-based                                     | The exam is offered only as a computer/web-based exam.                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Badge</b>                 | Online badge                                  | DevOps Foundation® Certified                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

It is recommended that candidates complete the DevOps Foundation course from a PeopleCert Accredited Training Organization (ATO).

### 3. Question Types

All questions are Objective Test Questions (OTQs), which present four options from which one option is selected. Distractors (wrong answers) are options that candidates with incomplete knowledge or skill would be likely to choose. These are generally plausible responses relating to the syllabus area being examined. Question styles used within this type are: 'Standard', 'Missing word', 'List' (2 correct items), and, exceptionally, 'Negative' standard OTQ.

#### Example 'Standard' OTQ:

What does the 'C' stand for in CALMS?

- A. Cooperation
- B. Collaboration
- C. Culture
- D. Continuous Integration

#### Example 'List' OTQ:

When putting the 1<sup>st</sup> Way into action, which **TWO** of the following should be **INCLUDED**?

- 1. Passing a known defect downstream
  - 2. Seeking an overview of the system
  - 3. Decreasing flow and adding constraints
  - 4. Allowing local optimization to cause global degradation
- 
- A. 1 and 3
  - B. 2 and 3
  - C. 2 and 4
  - D. 3 and 4

**NOTE:** Two of the list items are correct. List style questions are never negative.

#### Example 'Missing word' OTQ

Identify the missing word(s) in the following sentence.

According to Gartner, [?] is the most common challenge for organizations adopting DevOps principles.

- A. People
- B. Information
- C. Process
- D. Technology

#### Example 'Negative' standard OTQ:

Which of the following is **NOT** a goal of DevOps?

- A. Improved productivity
- B. Fewer but higher-quality software releases
- C. Lower risk software deployments
- D. Improved quality of code

**NOTE:** Negative questions are only used, as an exception, where part of the learning outcome is to know that something is not done or should not occur.

**Please see the sample paper for an example of the exam format and content.**

## 4. Syllabus

The DevOps Foundation® exam requires knowledge of the topic areas described below.

**Note:** The DevOps Foundation® certification uses the Bloom Taxonomy of Educational Objectives in constructing the learning content and the examination.

- The DevOps Foundation® exam contains Bloom 1 questions that test learners' **knowledge** of DevOps concepts and vocabulary terms.
- The exam also contains Bloom 2 questions that test learner's **comprehension** of these concepts in context.

| Category            | Topic                                                  |       | Assessment Criteria                                                                                                                                                                                                                                                                                  | BL |
|---------------------|--------------------------------------------------------|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| 1. Exploring DevOps | 1.1 Key terms, concepts and definitions used in DevOps | 1.1.1 | Define core DevOps terms and vocabulary, like: CALMS, Collaboration and communication, DevOps stakeholders, DevOps roles, Collective Body of Knowledge (CBOK), Cultural debt, Organizational culture, Organizational considerations, The Three Ways, Flow of work                                    | 1  |
|                     |                                                        | 1.1.2 | Define core Agile and product development terms like: Agile Manifesto, Agile service management, Agile software development, Scrum, Scrum roles, artifacts and events, Kanban, Epics, Test driven development, Waterfall (Project Management), ITS                                                   | 1  |
|                     |                                                        | 1.1.3 | Define Lean and Value terms like: Lean production, Lean thinking, Lean types of Waste (DOWNTIME), Waste (Lean), Cycle time, Velocity, Flow Metrics, Lead time, Value Stream Mapping (VSM), Value-Stream Management, Value-Stream Management Platform, value stream, constraint/bottleneck            | 1  |
|                     |                                                        | 1.1.4 | Define people, behavioral and cultural terms like: organizational culture, cultural debt, change fatigue, the Golden Circle, dojo, employee Net Promoter Score (eNPS), immersion, learning organization, improvement kata, safety culture, Kubler-Ross Change Curve, collaboration and communication | 1  |
|                     |                                                        | 1.1.5 | Know the purpose and objectives of DevOps                                                                                                                                                                                                                                                            | 1  |
|                     |                                                        | 1.1.6 | Describe DevOps Dev and Ops stakeholders                                                                                                                                                                                                                                                             | 2  |
|                     |                                                        | 1.1.7 | Understand that DevOps is evolving body of knowledge                                                                                                                                                                                                                                                 | 2  |
|                     |                                                        | 1.1.8 | Understand what DevOps is and what it is not                                                                                                                                                                                                                                                         | 2  |

|---------------------------|------------------------------|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
|                           | 1.2 CALMS & The Three Ways   | 1.2.1 | Know the five DevOps values of CALMS                                                                                                                                                                          | 1  |
|                           |                              | 1.2.2 | List the Three Ways of DevOps                                                                                                                                                                                 | 1  |
|                           | 1.3 Why DevOps matters       | 1.3.1 | Define cadence and velocity                                                                                                                                                                                   | 1  |
|                           |                              | 1.3.2 | Explain how DevOps automation supports agility, consistency, speed and reliability                                                                                                                            | 2  |
|                           |                              | 1.3.3 | Know the history of DevOps and the importance of cadence                                                                                                                                                      | 1  |
|                           |                              | 1.3.4 | Explain how DevOps improves cadence and velocity                                                                                                                                                              | 2  |
|                           | 1.4 The Business Perspective | 1.4.1 | Know the business drivers for DevOps adoption                                                                                                                                                                 | 1  |
|                           |                              | 1.4.2 | Understand the business value of DevOps                                                                                                                                                                       | 2  |
|                           | 1.5 The IT Perspective       | 1.5.1 | Know the technical drivers that underpin the DevOps approach                                                                                                                                                  | 1  |
|                           |                              | 1.5.2 | Describe key benefits of DevOps from an IT perspectives                                                                                                                                                       | 2  |
| 2. Core DevOps Principles | 2.1 The Three Ways           | 2.1.1 | Define feedback loops                                                                                                                                                                                         | 1  |
|                           |                              | 2.1.2 | Describe the Three Ways: Flow, Feedback, Continuous Experimentation and Learning                                                                                                                              | 2  |
|                           |                              | 2.1.3 | Explain how feedback loops enhance performance and provide examples                                                                                                                                           | 1  |
|                           |                              | 2.1.4 | Explain how the The First Way works to overcome constraints and improve flow                                                                                                                                  | 2  |
|                           |                              | 2.1.5 | Explain how the Second Way of Devops improves Flow and Quality                                                                                                                                                | 1  |
|                           |                              | 2.1.6 | Explain how the Third Way supports Continuous Experimentation and Learning                                                                                                                                    | 2  |
|                           | 2.2 Theory of Constraints    | 2.2.1 | Recall the definition of the Theory of Constraints                                                                                                                                                            | 1  |
|                           |                              | 2.2.2 | Recognize typical DevOps delivery constraints from examples, like: environment creation, test setup/execution, code deployment, security/QA assessments, architecture, product management, complex processes. | 1  |
|                           |                              | 2.2.3 | Recognize the role of constraints in systems                                                                                                                                                                  | 1  |
|                           |                              | 2.2.4 | Explain the relationship between TOC and the First Way (Flow)— finding/removing constraints to increase left-to-right flow.                                                                                   | 2  |
|                           |                              | 2.2.5 | Explain the role of constraints in systems and how constraints impact system flow and throughput                                                                                                              | 2  |
|                           | 2.3 Chaos Engineering        | 2.3.1 | Recall the definition of Chaos Engineering                                                                                                                                                                    | 1  |

| Category                | Topic                                         |       | Assessment Criteria                                                                                                                                               | BL |
|-------------------------|-----------------------------------------------|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
|                         |                                               | 2.3.2 | Recognize examples and/or tools associated with Chaos Engineering, like: Netflix's Chaos Monkey / Simian Army                                                     | 1  |
|                         |                                               | 2.3.3 | Explain how experimentation increases system resilience                                                                                                           | 2  |
|                         |                                               | 2.3.4 | Explain the purpose of chaos experiments: to surface unknown weaknesses, drive automatic recovery mechanisms, and strengthen reliability without customer impact. | 2  |
|                         |                                               | 2.3.5 | Distinguish safe vs. unsafe Chaos Engineering approaches—e.g., planned, observed, and reversible experiments vs. random outages without monitoring or rollback    | 2  |
|                         |                                               | 2.3.6 | Explain how Chaos Engineering supports a learning culture (the Third Way) by encouraging experimentation, learning from failure, and building resilience          | 2  |
|                         | 2.4 Learning Organizations                    | 2.4.1 | Define the concept of a learning organization                                                                                                                     | 1  |
|                         |                                               | 2.4.2 | Explain how learning culture and experimentation contribute to DevOps success and improve performance                                                             | 2  |
| 3. Key DevOps Practices | 3.1 Continuous Integration & Delivery (CI/CD) | 3.1.1 | Define Continuous Integration (CI), Continuous Delivery (CD), Continuous Testing, Continuous Deployment, CI/CD                                                    | 1  |
|                         |                                               | 3.1.2 | Identify the purpose of CI/CD                                                                                                                                     | 1  |
|                         |                                               | 3.1.3 | Explain how automation supports CI/CD pipelines                                                                                                                   | 2  |
|                         |                                               | 3.1.4 | Describe the benefits of frequent, reliable deployments                                                                                                           | 2  |
|                         | 3.2 Site Reliability & Resilience             | 3.2.1 | Define reliability and Site Reliability Engineering (SRE)                                                                                                         | 1  |
|                         |                                               | 3.2.2 | Define Resilience Engineering                                                                                                                                     | 1  |
|                         |                                               | 3.2.3 | Describe principles of Site Reliability and Resilience Engineering                                                                                                | 2  |
|                         |                                               | 3.2.4 | Explain how SRE principles contribute to system reliability                                                                                                       | 2  |
|                         |                                               | 3.2.5 | Describe the benefits of SRE                                                                                                                                      | 2  |
|                         | 3.3 Security / DevSecOps                      | 3.3.1 | Define DevSecOps                                                                                                                                                  | 1  |

| 5. Culture, behaviours and operating models | 5.1 Organizational Culture                       | 5.1.1     | Define culture and organizational culture                                                               | 1                                                                 |
|                                             |                                                  | 5.1.2     | Distinguish between culture and organizational culture                                                  | 2                                                                 |
|                                             |                                                  | 5.1.3     | Understand the influence of culture on change                                                           | 2                                                                 |
|                                             |                                                  | 5.1.4     | Understand the role of organizational culture in DevOps                                                 | 2                                                                 |
|                                             |                                                  | 5.1.5     | Explain the impact of cultural debt and how DevOps helps to overcome it                                 | 2                                                                 |
|                                             | 5.2 Behaviours                                   | 5.2.1     | Explain how behaviour drives culture in DevOps teams                                                    | 2                                                                 |
|                                             |                                                  | 5.2.2     | Explain the Thomas-Kilman Conflict Modes                                                                | 2                                                                 |
|                                             |                                                  | 5.2.3     | Define collaboration and its distinction from communication                                             | 2                                                                 |
|                                             |                                                  | 5.2.4     | Explain how collaboration and communication improve outcomes                                            | 2                                                                 |
|                                             | 5.3 Change Management                            | 5.3.1     | Explain change management concepts and identify stages of change (Kübler-Ross, diffusion of innovation) | 2                                                                 |
|                                             |                                                  | 5.3.2     | Explain how to manage resistance and change fatigue                                                     | 2                                                                 |
|                                             |                                                  | 5.3.3     | Describe collaborative communication practices and conflict models                                      | 2                                                                 |
|                                             |                                                  | 5.3.4     | Explain how shared tools and practices enhance teamwork                                                 | 2                                                                 |
|                                             | 5.4 Safety Culture                               | 5.4.1     | Define safety culture and blameless post-mortems                                                        | 1                                                                 |
|                                             |                                                  | 5.4.2     | Explain how a safety culture contributes to learning                                                    | 2                                                                 |
|                                             | 6. Automation and Architecting DevOps Toolchains | 6.1 CI/CD | 6.1.1                                                                                                   | Identify components of a DevOps toolchain and deployment pipeline |
| 6.1.2                                       |                                                  |           | Explain how CI/CD enables faster, safer releases                                                        | 2                                                                 |
| 6.1.3                                       |                                                  |           | Explain how automation reduces lead times and errors                                                    | 2                                                                 |
| 6.2 Infrastructure as Code (IaC)            |                                                  | 6.2.1     | Define Infrastructure as Code (IaC), artifact, and API                                                  | 1                                                                 |
|                                             |                                                  | 6.2.2     | Describe Infrastructure as Code, containers, and microservices                                          | 2                                                                 |
|                                             |                                                  | 6.2.3     | Describe the role of IaC and its role in DevOps automation                                              | 2                                                                 |
|                                             |                                                  | 6.2.4     | Explain the benefits of IaC in maintaining consistency                                                  | 2                                                                 |

| Category                               | Topic                                        |       | Assessment Criteria                                                                                                                                                   | BL |
|----------------------------------------|----------------------------------------------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
|                                        | 6.3 Cloud, Containers, and Microservices     | 6.3.1 | Define containers and microservices                                                                                                                                   | 1  |
|                                        |                                              | 6.3.2 | Identify cloud-native components and microservices concepts                                                                                                           | 1  |
|                                        |                                              | 6.3.3 | Explain how cloud technologies enable scalability and resilience                                                                                                      | 2  |
|                                        | 6.4 Toolchain Design                         | 6.4.1 | Define a toolchain                                                                                                                                                    | 1  |
|                                        |                                              | 6.4.2 | Identify components of a DevOps toolchain                                                                                                                             | 1  |
|                                        |                                              | 6.4.3 | Explain how to architect a toolchain for integration and flow                                                                                                         | 2  |
|                                        | 6.5 Value Stream Management Platforms (VSMP) | 6.5.1 | Define Value Stream Management Platforms (VSMP) and its capabilities                                                                                                  | 1  |
|                                        |                                              | 6.5.2 | Explain how VSMP supports visibility and governance                                                                                                                   | 2  |
|                                        | 6.6 Platform Engineering and Generative AI   | 6.6.1 | Explain how Platform Engineering tools support developers                                                                                                             | 2  |
|                                        |                                              | 6.6.2 | Explain use cases where Generative AI enhances DevOps stages                                                                                                          | 2  |
|                                        | 6.7 AIOps                                    | 6.7.1 | Define common uses of Generative AI and AIOps in DevOps measurement, like: anomaly detection, predictive analytics, root-cause analysis, and performance optimization | 1  |
| 7. Measurement, Metrics, and Reporting | 7.1 DevOps Metrics and Value Flow Metrics    | 7.1.1 | List key DevOps metrics: speed/throughput/tempo, quality, stability and culture                                                                                       | 1  |
|                                        |                                              | 7.1.2 | Identify key DevOps metrics, like: lead time, deployment frequency, MTTR, CFR                                                                                         | 1  |
|                                        |                                              | 7.1.3 | Define Lead Time and Cycle Time metrics                                                                                                                               | 1  |
|                                        |                                              | 7.1.4 | Explain how measurement supports the Three Ways of DevOps                                                                                                             | 2  |
|                                        |                                              | 7.1.5 | Explain guidelines to measure IT performance                                                                                                                          | 2  |
|                                        | 7.2 Dashboards                               | 7.2.1 | Define DevOps dashboards                                                                                                                                              | 1  |
|                                        |                                              | 7.2.2 | Explain AI/ML use cases for DevOps measurement                                                                                                                        | 2  |
|                                        |                                              | 7.2.3 | Describe the Gartner DevOps metrics pyramid                                                                                                                           | 2  |
| 8. Sharing, Shadowing, and Evolving    | 8.1 Collaboration Events                     | 8.1.1 | Identify DevOps Days, Dojos, and immersive learning environments                                                                                                      | 1  |
|                                        |                                              | 8.1.2 | Describe the purpose of internal DevOps Days and Dojos                                                                                                                | 1  |
|                                        |                                              | 8.1.3 | Explain how internal events promote cultural evolution                                                                                                                | 2  |
|                                        | 8.2 DevOps Leadership                        | 8.2.1 | Define transformational leadership characteristics                                                                                                                    | 1  |
|                                        |                                              | 8.2.2 | Explain the role of leadership and transformation in DevOps adoption                                                                                                  | 2  |

| Category | Topic                                  |       | Assessment Criteria                                                                   | BL |
|----------|----------------------------------------|-------|---------------------------------------------------------------------------------------|----|
|          | 8.3 Roles and Responsibilities         | 8.2.3 | Explain how leadership supports DevOps adoption                                       | 2  |
|          |                                        | 8.3.1 | Identify core DevOps roles and required skills and competencies                       | 1  |
|          |                                        | 8.3.2 | Explain how roles collaborate within cross-functional teams                           | 2  |
|          | 8.4 Getting Started and Transformation | 8.4.1 | Define DevOps transformation stages                                                   | 1  |
|          |                                        | 8.4.2 | Explain how to start small and scale DevOps adoption and overcome adoption challenges | 2  |
|          | 8.5 Critical Success Factors and Risks | 8.5.1 | Identify success factors and challenges in DevOps initiatives                         | 1  |
|          |                                        | 8.5.2 | Explain how to mitigate common DevOps adoption risks                                  | 1  |
|          |                                        | 8.5.3 | Recognize critical success factors and risks in transformation                        | 1  |

The candidate is expected to understand the following DevOps concepts and vocabulary at a Bloom's Level 1 and 2:

- Agile Manifesto
- Agile service management
- Agile software development
- AIOps
- Application Programming Interface (API)
- Artificial Intelligence
- CALMS
- Change failure rate
- Change fatigue
- ChatOps
- Collaboration and communication
- Collective Body of Knowledge (CBoK)
- Constraint
- Containers
- Continuous integration
- Continuous delivery
- Continuous deployment
- Continuous testing
- Cultural debt
- Cycle time
- Dashboard
- Deployment pipeline
- Deployment frequency
- DevOps
- DevOps metrics
- DevOps stakeholders
- DevOps roles
- DevOps toolchain
- DevSecOps
- Dojo
- DORA metrics
- employee Net Promoter Score (eNPS)
- Epics
- Flow of work
- Flow Metrics
- Generative AI
- Golden Circle
- Immersion
- Improvement kata
- Infrastructure-as-Code
- IT service management
- Kanban
- Kubler-Ross Change Curve
- Lead time
- Lean production
- Lean thinking
- Lean types of Waste (Downtime)
- Learning organization
- Machine Learning
- Mean Time to Repair/Recover (MTTR)
- Metrics
- Microservices
- Observability
- Open source
- Organizational culture
- Organizational considerations
- Platform Engineering
- Resilience engineering
- Scrum
- Scrum roles, artifacts and events
- Service
- Shift left
- Simian Army/Chaos Monkey
- Site Reliability Engineering
- Test driven development
- Testing (unit, acceptance, integration)
- The Three Ways
- Theory of Constraints
- Thomas-Kilman Conflict Modes
- Value-Stream Management
- Value-Stream Management Platform
- Value stream mapping
- Velocity
- Waste (Lean)
- Waterfall (Project Management)

## 5. Exam specification

The examination has the following structure:

| Topic Area                                    | Weighting % |
|-----------------------------------------------|-------------|
| Exploring DevOps                              | 12.5%       |
| Core DevOps principles                        | 10.0%       |
| Key DevOps practices                          | 17.5%       |
| Business and technology frameworks            | 17.5%       |
| Cultures, behaviours, and operating models    | 15.0%       |
| Automation and architecting DevOps toolchains | 12.5%       |
| Measurement, metrics, and reporting           | 5.0%        |
| Sharing, shadowing, and evolving              | 10.0%       |
| <b>Total</b>                                  | <b>100%</b> |

**THE LANGUAGE OF COLLABORATION**

## **Thank you for completing this course!**

Please take a few minutes to give us your feedback on your experiences and learning from the course by completing the online course evaluation survey [here](#).

PeopleCert has been accredited by Lloyd's Register, UK (now LRQA), in accordance with ISO 14001 for Environmental Management since 2006. Recognized through numerous awards, we remain committed to ESG leadership and the preservation of our planet.
